Dean Keller

Re: Aeration system performance

Mr. Keller,

We agreed to test your systems for 12 months to see if they were effective at cutting our pumping costs. We are now 5 months into our test and we have already seen some good results. Our corporate policy requires us to monitor accumulated solids in our grease trap and to have it pumped before we reach 25% solids accumulation. This had required us to pump the tank every 3 weeks or so, at a cost of \$275 per pumping. Since we have started working with you we have not had to pump at all and our solid level is still only at 16%. It appears we are on track to save over \$4,000 per year.

Thank you,

Jade Bock
Operating Partner
